Summary

Final-year engineering student at National Engineering School of Tunis (ENIT), focused on AI and Reinforcement Learning. Experienced in Python, deep learning frameworks, and building intelligent agents for robotics and predictive applications.

Education

National Engineering School of Tunis (ENIT) Engineering program in Software Engineering.	Sep 2023 – Present
Preparatory Institute for Engineering Studies of Monastir (IPEIM) Second-year scientific preparatory class, ranked 379 / 1830 in the national entrance exam for engineering schools.	Sep 2022 – Jun 2023
Preparatory Institute for Engineering Studies of Nabeul (IPEIN) First-year scientific preparatory class.	Sep 2021 – Jun 2022

Experience

Insomea Cloud Solutions <i>AI and DevOps Intern</i>	Tunisia Jun 2025 – Aug 2025
- Developed an AI agent (LangChain, Google Gemini LLM, MCP server) to automate cloud deployments via CI/CD, containerized with Docker and orchestrated with Kubernetes (AKS), reducing human interventions by 40%.	

Projects

Lung Cancer Detection with Deep Learning (VGG16) - Built a deep learning model using transfer learning (VGG16) to classify lung histopathology images into cancerous and normal tissue, achieving 98% test accuracy on the LC25000 dataset.	Dec 2025
RAG based AI Agent using LangGraph for Document Question Answering - Built an AI agent using LangGraph with Retrieval-Augmented Generation (RAG), embeddings, vector search, and LLM reasoning to answer questions from PDFs, web pages, and structured documents.	Nov 2025
Big Data Sales Analytics Pipeline using Hadoop MapReduce - Built a containerized Hadoop cluster on Docker and developed Java MapReduce jobs to process large-scale retail datasets, extracting insights on payment trends and store performance.	Nov 2025
Fine-Tuning ResNet50 for Animal Classification - Fine-tuned a ResNet50 model on a custom dataset of 25,000 animal images across 10 classes, achieving over 90% validation accuracy.	Oct 2025
Churn Detection with Random Forest, XGBoost, and Stacking - Built predictive models to identify customer churn using ensemble methods. Achieved 87% precision and 85% recall on test data.	Sep 2025
Farm Management AI Platform - Developed a full-stack AI solution (Spring Boot + React + MongoDB) to detect anomalies in crops and livestock using two YOLOv8 ML models. Average accuracy of 92%.	Jun – Aug 2025

Skills And Languages

- **Programming Languages:** Python, Java, JavaScript
- **AI and ML:** TensorFlow, PyTorch, YOLO, LangChain, Reinforcement Learning (PPO, DQN)
- **Robotics Simulation:** PyBullet, Gymnasium
- **Frameworks:** Spring Boot, Angular, Flutter
- **DevOps and Cloud:** Docker, Kubernetes, GitHub Actions, Azure
- **Databases and APIs:** MySQL, MongoDB, REST APIs
- **Others:** Git, Linux, CI/CD
- **Languages:** English: Fluent (B2), French: Advanced (C1 – TCF)

Certifications

- **Building RAG Agents with LLMs** — Nvidia - [View Certificate](#)
- **Building Transformer-Based NLP Applications** — Nvidia - [View Certificate](#)
- **Introduction to Transformer-Based NLP** — Nvidia - [View Certificate](#)
- **Git and GitHub Mastery** — 365 Data Science - [View Certificate](#)
